DocuMind Academic Benchmark: Deep Learning for Vision

Abstract:
We introduce a convolutional neural network (CNN) model for visual document classification. Our model, dubbed

1. Introduction:
Academic document understanding requires capturing both typographical layout and visual structure. Traditional

2. Methodology and Architecture:

The proposed system uses a CNN model featuring depthwise separable convolutions to reduce parameter coun

3. Experiments and Results:
We evaluated VisionDocNet on the RVL-CDIP benchmark dataset, comprising 400,000 document images. The p
